NEW ETP CUBIT MINI

SAVE TIME – SAVE MONEY - NO MORE TRIAL AND ERROR!

ETP CUBIT mini is quick, easy and precise to use in a vast number of woodworking applications. By using the ETP CUBIT mini you literally make money by not wasting your valuable time with tool changes and replacements of cumbersome shims. The adjustment of a tool set can be made in seconds, either directly on the woodworking machine or at the grinding operation. You always get the desired adjustment thanks to the unrivalled repeatability. No more trial and error operation!

CUBIT MINI INSPIRES CREATIVITY

The CUBIT MINI can be attached to a number of different ETP HYDRO-GRIP products each suitable for numerous and various applications. Illustrated on these pages is a combination with a HYDRO-GRIP TYPE CI and EI2. Also presented is a combination with a hydraulic expanding HSK arbor.

Use your creativity and you will soon find several applications where to gain a lot by using a reliable and precise adjustable system.

QUICK AND EASY TO USE

The adjustment is quickly and easily done in a few moments by turning the top cover. There is an indicating scale and a click function assisting you to register the movement on the tool set. Each click is equal to a 0.025 mm movement and the total adjustment range is 8 mm.

The patented adjustable system has a unique unrivalled repeatability – no backlash as on a traditional adjustment made by nut and thread parts.
